the unknown whole number in an addition equation relating the two numbers.

$8 + \underline{3} = 11$

$\underline{14} = 7 + 7$

$12 + \underline{4} = 16$ because $16 - 4 = 12$

$13 = \underline{9} + 4$

$5 = \underline{8} - 3$

$16 - \underline{7} = 9$

$4 = 10 - \underline{6}$ because $6 + 4 = 10$

$20 = 10 + \underline{10}$

the pattern is...
The ones place increases by 1.
The ten's place stays the same until it gets past 9 and goes back to 0.

the pattern is...

82 83 84 85
86 87 88 89
90 91 92 93
