Sea Turtles

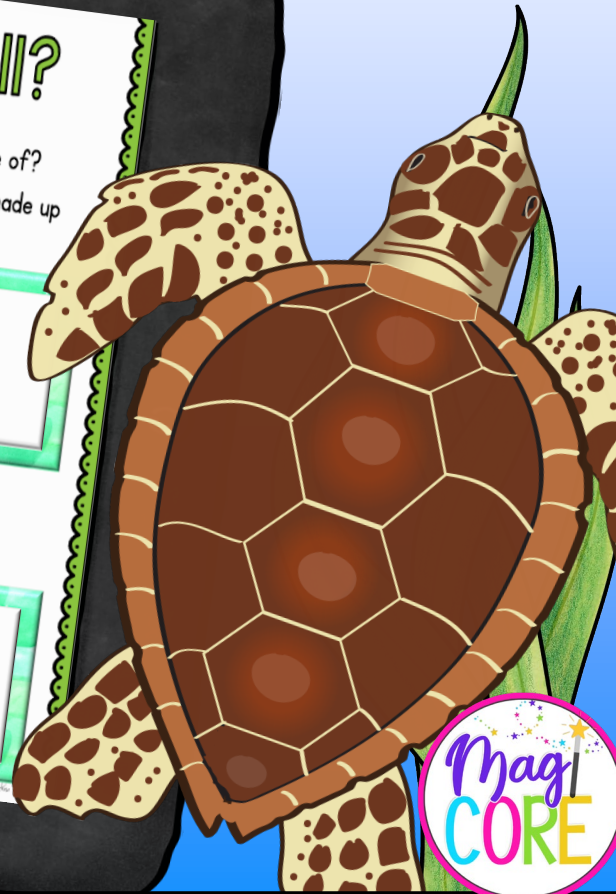

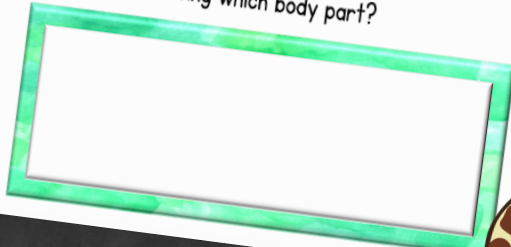

Can Turtles Take Off Their Shell?

ve shells. You may have heard it said that
hell is like its home. But just like we can
e and go outside, can a turtle leave its
he video to find out more about turtle

1. What is the outer shell of a turtle made of?
Which body part to humans have that is made up
of this material?

2. If you removed a turtle shell, it would be
similar to removing which body part?

Sea Turtles in Danger

Did you know sea turtles have been around since the dinosaurs? But today, all 7 species of sea turtle are either vulnerable or endangered. They are hurt by pollution and overfishing. Green turtles have been hunted for their meat and eggs. Loggerhead turtles mistake trash like plastic bags for food because they look like tasty jellyfish. Other turtles get caught in fishing nets. Even the lights from buildings close to the beach cause problems for baby sea turtles. The lights confuse the babies who are trying to follow the moonlight into the ocean. There are many ways you can help save the sea turtles so they do not become extinct like the dinosaurs!

Copy and paste the stamp into your scrapbook.

Help protect sea turtles
turn off the lights.
