Integrates Reading

Zebra Predators

Being herbivores, zebras do not hunt. There are, however, several animals that hunt zebras. The main predators of zebras are lions and spotted hyenas. If a zebra is near water, a crocodile may prey on it. Less common predators include cheetahs and wild dogs. When hunted, zebras can run away at speeds of up to 43 miles per hour! Zebras stay together in herds, which makes them more difficult for lions and hyenas to catch.

Watch the video to see how a zebra defends itself when attacked.

Describe what a zebra does to defend itself.

Engaging & Educational Media

Why Do We Ride Horses but Not Zebras

Directions: Watch the video below to learn why we ride horses but not zebras. Then, answer the questions.

What are 3 of the reasons we can't ride

1.
2.
3.

Would you want to try to ride a zebra?
why not?

Critical Thinking

How to Help

Brainstorm some ways you could help save zebras. What could you do in your life to make an impact?

An open notebook with two blank pages, each outlined with a light blue border. The notebook is positioned on a yellow surface, and its dark grey cover is visible at the top and bottom. On the left side of the cover, there is a small circular button with a white 'G' icon. The background of the entire image is a light blue sky with a faint silhouette of a zebra and some trees in the distance.
